T3 TELECOM SOFTWARE ANNOUNCES THE RELEASE OF ITS VOICE CONTROL PRODUCT PROVIDING VOICE-ACTIVATED VOICEMAIL

...Aumtech's MRCP Connector Provides Quality, Reliability, and Affordability to T3 Telecom's Speech Recognition Solutions

New York, NY – October 7, 2009. T3 Telecom Software is pleased to announce the release of T3 Voice Control, providing a voice-enabled front-end to the T3 voice messaging system. With T3 Voice Control, a user can speak verbal commands to send messages, review messages and set personal options in addition to, or in place of, using traditional touch tone key presses on the telephone keypad.

The majority of T3 voicemail is now speech enabled, allowing the user to jump to almost any area of voicemail from the main menu (subscriber's menu). The user also has multiple options to address a message by speaking a name, mailbox number or group number, and can speak the day of the week or date to set a time/date stamp for a wake-up call or future delivery message.

The following specific voicemail features are voice-activated:

- Review new and saved voice, email and fax messages
- Control speed and volume options
- Save, delete, reply to, redirect, and repeat messages
- Send messages internally and externally
- Stamp messages priority, confidential, return receipt and no receipt notification
- Access directory assistance
- Schedule messages for future delivery
- Set wake up calls
- Set up follow-me
- Set message notification
- Set up personal greeting, temporary greeting and password
- Set up group lists and send messages to groups
- Set up call screening
- Set transfer status
- Check message delivery
- Change personal assistance number
- Set scheduled greetings
- Undelete messages
- Access new user set up and Voice Control tutorial

T3 Telecom has engaged with Aumtech, a leading provider of speech recognition solutions, in the development of Voice Control.

Yaniv Livneh, CEO of T3 Telecom Software states, "The reliability and quality of speech recognition has now reached enterprise grade applications at an affordable cost. T3 Voice Control is a major step forward in simplifying voice messaging and personal availability processes (such as presence and find me/follow me) as it allows the user to perform multi-step processes using natural language commands."

“T3 Voice Control represents a breakthrough in how businesses use Speech Recognition to meet their needs, even in cost-sensitive applications” said Tom Porter, Executive Vice President and COO of Aumtech (www.aumtech.com). "We are pleased to help T3 deliver more value to its customers in areas where Speech Recognition was, historically, not an option because of its price. With the Aumtech MRCP Connector, businesses have powerful Speech Technology tools at their disposal for a fraction of competitors’ prices." Mr. Porter confirmed that T3 is able to capitalize on Aumtech’s MRCP Connector, which enables T3 to provide its customers with Speech Recognition and Text-to-Speech capabilities for less than 5% of the cost of similar high-quality ASR and TTS solutions.

About Aumtech:

Aumtech is a private-label supplier of Interactive Voice Response (IVR) Platforms to over 200 Telephone Companies, Applications Services Operators, Platform Resellers, and select Enterprise Markets such as Government and Airlines. Aumtech was founded in 1988 and has been building advanced, carrier-class IVR platforms since 1993. Since introducing its CGATE IVR platform in 1996, Aumtech has deployed its systems into two of the largest IVR installations in North America and Europe, adding video enhancements, while maintaining its certification as VoiceXML 2.1 Compliant. Innovations have included the first SIP-protocol IVR system, and IVR with Outbound Notification Capabilities in 2000. Most recently, Aumtech continues its innovation by delivering the MRCP Connector, enabling clients to gain Automated Speech Recognition (ASR) and Text-to-Speech (TTS) capabilities for less than \$15 per port on all industry standard IVR platforms.
